

WebSentry Monitoring for Bearings

Ensure a long operating life of your NASH liquid ring pump with the WebSentry Bearing Monitoring System.

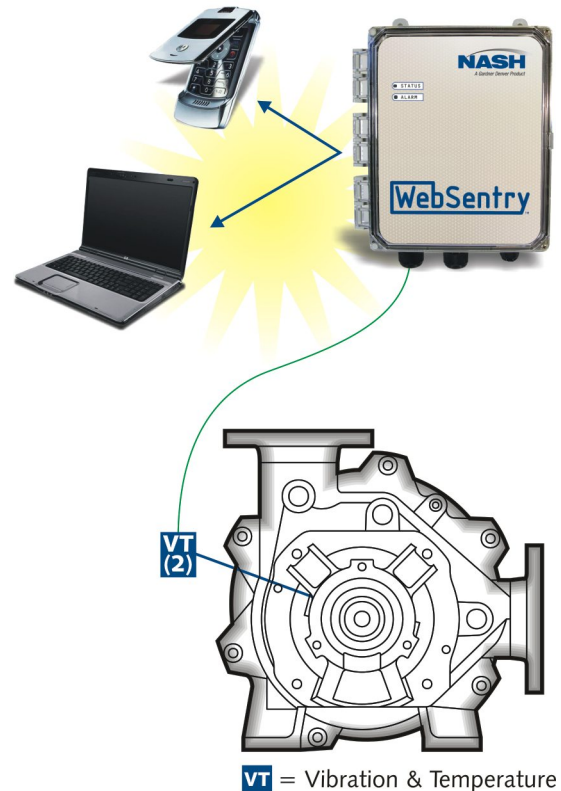

The WebSentry Bearing Monitoring System offers the ability to:

- Avoid unscheduled downtime due to bearing failure
- Reduce repair costs by correcting the bearing problem before it results in pump failure
- Continuously monitor the bearing temperature and vibration levels. If an alarm condition occurs, WebSentry will immediately notify key personell by email or text message
- Review system conditions by logging into our secure system from any computer

A Nash service technician can help you remotely monitor your system and make recommendations prior to a visit.

Typical Bearing Failure

Most bearing failures are not caused by a bearing manufacturing defect. Bearing failure mode is usually caused by lubricant breakdown or above-normal bearing loads.
