

Nash Liquid Ring Pumps and Compressors for the Sugar and Alcohol Industries

Vacuum Filtration Systems

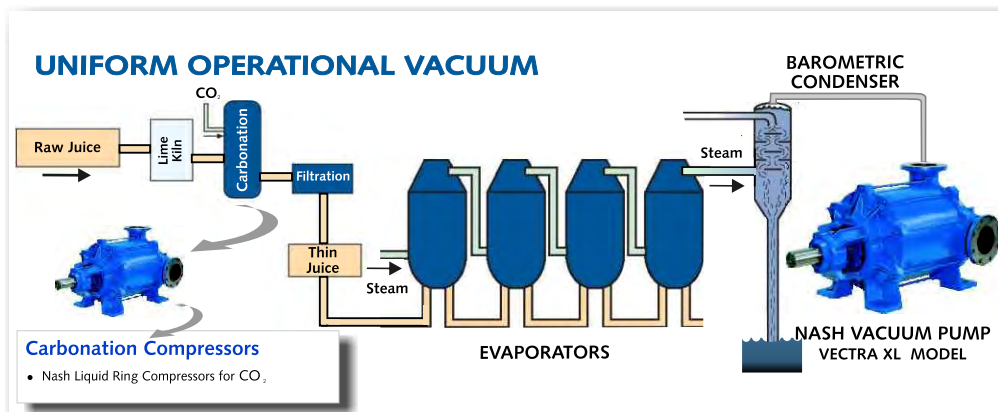

Original Nash Vacuum Pumps GUARANTEED EFFICIENCY

- The choice of a Nash vacuum pump is the right selection to increase the performance of the mud filtration vacuum system.
- Low water and energy consumption.
- Easy filter start up.
- Uniform vacuum during the whole process.
- Robust and reliable equipment.

VACUUM PRESS FILTER

Evaporation

- Provides energy and water savings, which reduces operational costs.
- Fast start up of the equipment.
- Uniform vacuum during the whole process.
- Versatility to operate as individual or centralized vacuum system.

Consult a NASH specialist to obtain the best Vacuum System solution for your industry.

Vacuum Boiling

INDIVIDUAL PUMPS VACUUM SYSTEM

CENTRALIZED VACUUM SYSTEM

- Considerable increase in productivity due to reduction of processing time.
- Water reduction of up to 50% if compared to other systems.
- Energy reduction of up to 40% if compared to other systems.
- Due to the ease of automation of the boiling control, the vacuum level is held stable and constant.
- Installation costs reduced due to the possibility of putting several systems on one central vacuum pump.

Alcohol Production

ALCOHOL DEHYDRATION

- Increase the efficiency and productivity of your equipment using NASH vacuum systems.

AERATION OF FERMENTATION MUST

- The aeration and agitation of Fermentation Must using NASH liquid ring compressors, these are totally oil free. The quality and durability assure good results in this operation.
